

COMPUTER SCIENCE OVER VIEW BIL 101 GTU

HW #6

Answer 1:

Answer 2: let us assume that I am a boss of a small computer programming corporation :

a) Assume that I do not have enough software engineers in my corporations table sheet I would I try to expand my personals and I would try to make more advertisements about my new and small corporation for example guess that we have created a small operating system like windows and we are at the start of the journey in these days without making advertisements and making people to now about it ,expanding the new creations are not easy so I would advertise a lot to make is bigger and bigger ,for example if I would like to make a small company which would serve by computer engineers I would chose the best computer engineers in that time I would be an successful boss.

b) assume that my small company is expanding day by day and we are creating plenty of small apps and putting is in open sources and one of my Bayers he or she does not no what to use for his or her needs in that time we would offer him or her that what kind of app or program he or she should use to solve his or her problem for example if some one ask us that he or she want to use some application for his new specific moodle kind of phone in that time we offer him ir her that what kind of program he or she must use for his new phone and we would offer our created apps to make if more famous .

c) If my company counters such a sectutaion and be told that in a period of time we must create the named program or application or something like that we would try to do it and evaluate it right the time and we would try to do it more completed that our bayer has ordered .for example if we told that make a program for and exporting and importing company whethen one month and we told that it doesn't matter what kind of program you right to it matter it the time so in that time we would attempt to do it much better and more better and right a convenient program which could be able to calculate importing and exporting the stuffs .
